Infrared Ball Detect (IR-OPTIC)

Infrared Ball Detect Theory

This ball detect is designed to replace the existing Brunswick infrared ball detect for you 86 scanner or CCD camera. By using an infrared beam that transmitted across to reflector and then refracted back to photo transistor is how the ball is detected.

Installation Instructions

Remember to remove power before performing any installation!!

First, start by removing the old optic and reflector. Next you will utilize the mounting screws and plate that is already there. Mount the new reflector in the location of the old one with the hardware provided. Mount the optic on the existing bracket and utilize the mounting screws to secure to the bracket. Plug the white Molex connector into the existing white Molex connector from the scoring. Finally, power up the optic and align buy using the LED on top. If the LED is lit the optic is aligned properly.
